Subject: Site visit - TT8453

Hi Carol,

I hope you are well.

Our engineer has spoken with me regarding the unit in question still not working after re-booting. Please find a site visit quotation attached for this which I have discounted as you are fairly local to us. Our engineer will take a look and try to repair on site. If he is unable to repair on site, we would need your permission to remove it and return it to our service centre for further inspection and repair. There would be an additional pre inspection cost for this of £125 and any repairs / parts needed would be quoted separately.

Did you also check your other unit? If so, was that one working all ok?

Kind regards,

trafficechnology
